Hari Simran Khalsa

Software Development and Business Systems

Dublin, Ohio | snowmany19@gmail.com | github.com/snowmany19

Portfolio: snowmany19.github.io/hari-simran-khalsa-portfolio

Professional Summary

Software developer with experience delivering a commercial SaaS product and building applications for data reconciliation and business workflows. Works with Python, SQL, React.js, and cloud deployment tools. Brings hands-on warehouse and transportation systems experience to requirements analysis, validation, and implementation.

Technical Skills

Languages and applications: Python, SQL, JavaScript, TypeScript, React.js, FastAPI, HTTP APIs

Data and analytics: PostgreSQL, SQLite, data validation, relational modeling, Power BI, DAX

Delivery and systems: Git, GitHub Actions, AWS hosting, Docker, Kubernetes, automated tests

Software Development

Security Flaw Solutions | Founder and Lead Developer

AIncident | Commercial SaaS product

- Built an incident-reporting application using a React.js frontend, Python/FastAPI services, and PostgreSQL. Integrated GPT summaries, PDF reports, role-based access, and Stripe subscription billing.
- Delivered the application using AWS hosting, GitHub Actions, Docker, and Kubernetes. Owned requirements, development, deployment, and commercialization.
- Took the product from requirements to a paid subscriber and a $4,995 sale through Flippa.

Selected Technical Projects

FlowCheck | Python, SQLite, JavaScript

- Built a reconciliation workflow for warehouse and transport CSV exports, with bounded input validation, split-line aggregation, shipment/SKU comparison, and discrepancy export.
- Implemented idempotent runs, atomic storage, JSON endpoints, and audit history. Published a browser demo showing problem and corrected snapshots using fictional data.

SFS Warehouse | React, TypeScript, Relational Data

- Developed a warehouse application pilot with inventory reservations, scan validation, staffing assignments, and employee acknowledgments. Used server-side roles and revision checks to protect shared state.

ShiftLens | SQL, Power BI, DAX, JavaScript

- Created a reproducible analysis of productivity, labor utilization, and quality across a synthetic 28-day warehouse dataset. Included SQL queries, weighted measures, DAX, and an interactive browser view.

Hari Simran Khalsa

Systems and Implementation Experience

FedEx | Operations Supervisor | 2026 to Present

- Use Blue Yonder for attendance and staffing workflows. Coordinate package flow, quality exceptions, and recovery across operating areas.
- Create supervisor resource packets that translate operating methods and standards into repeatable instructions.

Hidaka USA | TMS/WMS Specialist and Shipping Associate | 2026

- Supported warehouse and transportation systems connecting outbound freight, receiving, inventory movement, and manufacturing requirements.
- Applied workflow improvements to reduce recurring operating costs and coordinate material movement with production needs.

Schneider | Implementation Team | September to November 2025

Transportation Planning and Dispatch | Security Flaw Solutions contract

- Contributed to the launch of Schneider's Kroger account by coordinating scheduling, shipment tracking, operational reporting, and implementation documentation.
- Resolved workflow conflicts across transportation planning and dispatch during account startup.

Target | Security Specialist, Asset Protection | 2024 to 2025

- Worked with TrueEye and TruScan automated skip-scan detection workflows. Collected evidence and maintained case documentation for theft and fraud investigations.

UPS | Dispatch and Building Automation Supervisor | 2023 to 2024

- Monitored automated sort-system conditions and coordinated dispatch for 70 drivers, adjusting routing and labor to changing operating conditions.
- Reduced overtime by 20% through workforce balancing.

UPS | Operations Supervisor | 2020 to 2022

- Used quality and service indicators to guide process changes and coaching for a 70+ person operation. Reduced daily misloads from approximately 100 to fewer than 10 over three months.

Additional Project Work

Relay Logistics | Python, SQLite, HTTP APIs, Docker

- Built a private application pilot covering quotes, booking, dispatch, delivery, invoicing, and payment records. Added import previews, validation, repeat-import handling, and backup verification with synthetic data.

Education and Professional Development

University of Cincinnati | Mechanical Engineering coursework

IBM AI Engineering certificate | In progress
